4.14	WebEDSS: Longitudinal multiple results per patient.	72

3. Purpose and Background

The purpose of this document is to state all data items captured for the Participant portal of the United Kingdom MS Register. Specifically for version 3 of the platform. Accessible to end users at:

https://ukmsregister.org/

Launched to limited test users in July 2018, formal launch data September 2018

Some data are ported from versions 1 & 2 where appropriate. Start dates are listed and alterations noted where appropriate

To register for a test account and assess in situ as a researcher visit:

https://demov3.ukmsregister.org/

Create an account and answer questionnaires.

There is a clinical data dictionary version of this document.

4. Instruments in this document

Instrument Name	Format	Purpose	Data collected for
Demographics	Single Point	Basic participant identifiers	MS Register/All
			researchers
About Me	Single Point	Household/Educational data	MS Register/All
			researchers
MyMS	Single Point	Specific MS Epidemiology	MS Register/All
			researchers
EQ5D-3L	Longitudinal	General QOL Instrument	MS Register/All
			researchers
HADS	Longitudinal	General Anxiety/Depression	MS Register/All
		instrument	researchers
FSS	Longitudinal	General Fatigue Instrument	MS Register/All
			researchers
MSIS29V1/2	Longitudinal	MS Specific Impact scale	MS Register/All
			researchers
MSWS-12	Longitudinal	MS Specific walking scale	MS Register/All
			researchers
WebEDSS	Longitudinal	MS Specific outcome measure	MS Register/All
			researchers
Comorbidity	Longitudinal	Other associated conditions	MS Register/All
			researchers
Symptoms	Longitudinal	Current symptoms and severity	MS Register/All
			researchers
Relapses	Longitudinal	Any relapses in the last six	MS Register/All
		months	researchers

4.1 Supplemental Instruments

Instruments collected by other researchers are available in supplemental documents. These are available on request and for data , with permission from that researcher. These are only a top-level overview of the studies. Studies may contain multiple instruments.

Instrument Name	Format	Purpose	Data collected for
PROMIS Fatigue	Longitudinal	Pharmaceutical Study	Merck KgAA
Costs of MS	Single Point	Pharmaceutical Study	Sanofi Genzyme
Vitamin D and MS	Single Point	Epidemiology	Queen Mary University
			London
My MS My Needs	Longitudinal	Population survey	MS Society UK
MS Childbirth	Single Point	Population Survey	Queen Mary University
			London/MS Register
MS Film	Single Point	Population Survey	Imperial College London
Illness Events	Longitudinal	Population Survey	Exeter University

4.2 Portal demographics – One row per Participant

Participants once signed up must enter demographic data at Registration. Since V3 email addresses are validated.

Periodically participants are prompted to update this data (18 monthly), there are visual cues on the Hub screen that will prompt users to update data on login if it looks incorrect or circumstances have changed.

Data derived from: Other MS Registers, Clinical Advisory Group, PwMS, Standardised data dictionaries

4.5 EQ5D-3L: EuroQOL Longitudinal Data: Multiple scores possible for Individuals

The EQ5D is a general quality of life instrument that assesses participants overall quality of life, there are 6 dimensions. Five ask you to rate your quality of life on 3-point scale about activities of daily living. The sixth is a self-rated marker out of 100 for how you view your own quality of life right now.

Data Derived from: EuroQOL

Reference

Brooks R. EuroQol: the current state of play. Health Policy. 1996;37:53-72.

4.7 Fatigue Severity Scale (FSS): Longitudinal Data: Multiple scores possible for Individuals over time

FSS used to ascertain changes in fatigue over time, validated in pwMS

Data derived from Krupp LB. The Fatigue Severity Scale: Application to Patients With Multiple Sclerosis and Systemic Lupus Erythematosus. Arch Neurol. 1989;46:1121.

Details:

9 Item questionnaire with a maximum total of 63 and minimum of 9

Scores can be obtained by summing all values.

Scores of more than 36 are indicative of fatigue.

FIRST DATA: 15/09/2016

Alternative calculation method

in 2011, Lerdal found that it is not advisable to use items 1 and 2 in the FSS in a mean score. FSS-7 shows better validity and reliability. This questionnaire with 7 items is also more sensitive for measuring the change in fatigue Field labels hold requisite data.

4.8 Multiple Sclerosis Impact Scale 29 V1 Longitudinal Data: Multiple scores possible for Individuals over time

MSIS was created by Hobart et al to be a more effective assessment of the impact of MS than EDSS score and other purely physical outcome measures. The MS Register has asked both version 1 and version 2 of the MSIS score.

DATA FROM V1 FROM 12/05/2011To 12/04/2012 V2 FROM 12/04/2012

Data derived from Hobart J. The Multiple Sclerosis Impact Scale (MSIS-29): A new patient-based outcome measure. Brain. 2001;124:962–973. Version 2 from direct communication with Hobart J

Asks for these impressions over the last **two** weeks. MS Specific Instrument of Impact separated into Physical and Psychological Components. First 20 questions are physical last 9 are psychological.

Data can be totalled as a complete score by addition, or viewed as Physical and Phycological sub scores.

4.10 Multiple Walking Scale Longitudinal Data: Multiple scores possible for Individuals over time

The MSWS scale is a companion to the MSIS29. Also developed by Hobart et al

Derived from: Hobart JC, Riazi A, Lamping DL, Fitzpatrick R, Thompson AJ. Measuring the impact of MS on walking ability: The 12-Item MS Walking Scale (MSWS-12). Neurology. 2003;60:31–36.

MSWS was created by Hobart et al to be a more effective assessment walking alone

Asks for these impressions over the last **two** weeks. Note the different responses in the first 3 questions.

Data can be totalled as a complete score.

FIRST DATA: 12/04/2012

4.12 Current Patient Symptoms, Longitudinal

Records date experienced and severity of patients Symptoms Source PwMS, Clinical Advisory Group

The symptoms questionnaire was vastly revised for v3 of the portal. Version 1-2 only captured if a symptom was present or not (same symptoms as below) and a timestamp that this was this data was imported to version 3. Some detail may therefore be missing in symptom data prior to 01/08/2018

Symptoms First Data: 10/10/2011

4.14 WebEDSS: Longitudinal multiple results per patient.

The webEDSS is used with permission from Leddy et al Leddy S, Hadavi S, McCarren A, Giovannoni G, Dobson R. Validating a novel web-based method to capture disease progression outcomes in multiple sclerosis. Journal of Neurology. 2013;260:2505–2510.

Data is sourced from an API from a javascript implementation of the instrument run on a third party server. No patient data is transmitted to this server just a GUID. The returned data from the server is matched to the GUID and the score and datestamp stored on the MS Register platform,

NOTE: Participants can enter multiple scores in seconds of each other by pressing 'back' on the instrument and making slight changes to their answers. The Registers internal policy is to use the first result on a day as the 'correct' one.

First Data: 22/11/2016
